SCIENCE ABSTRACTS, SERIES A

physics abstracts

An INSPEC Publication
The Institution of
Electrical Engineers

Y-DECEMBER 1971

PART IIa SUBJECT INDEX NUMBER

PHYSICS ABSTRACTS is published fortnightly by the Institution of Electrical Engineers, PO Box 8, Southgate House, Stevenage, Herts, SG1 1HQ, England, in association with the American Institute of Physics. The subscription price for North and South America is $264. Orders from the Americas and from all AIP members should be sent to the AIP, 335 East 45th Street, New York, NY 10017, USA. Second-class postage paid in New York, NY 10001. The subscription rate for the rest of the world is £110 and orders should be sent to the IEE, Savoy Place, London WC2R 0BL, England. Printed by Unwin Brothers Limited, Woking and London, England.

SUBJECT INDEX—PART II

INTRODUCTION

The entries in this index refer to the abstracts by their serial number, not by the page number. The entries are grouped under headings (printed in bold type, e.g. "**Algebra**"). If a heading for a particular subject does not appear, the subject may be in the form of a cross-reference to another heading, perhaps of a more general nature. Many of the headings are subdivided by the use of subheadings, which are indented (i.e. printed slightly to the right) and commence with a small letter.

The information contained in the subject index is illustrated by following example:

main heading
Crystal electron states 'See also' crossreference to another heading
See also Colour centres
keyword
(file word)
helicon relaxation of electron spins 1-17901
polarons
subheading modifier line (entry) abstract number in 1971

Associated with the subheading "polarons" is a 'See' crossreference as follows:

Polarons *See Crystal electron states/polarons*

This means that for papers on "polarons" the reader should consult the subheading "polarons" of "Crystal electron states" as displayed above.

ARRANGEMENT OF HEADINGS AND SUBHEADINGS

The headings and crossreferences are arranged throughout the index in alphabetical order according to the "word by word" system. The subheadings are themselves arranged in alphabetical order under their respective headings.

ARRANGEMENT OF ENTRIES UNDER HEADINGS

Entries are arranged in four distinct groups as follows:

First group:	arabic numerals
Second group:	English alphabet (A-Z), roman numerals, Greek alphabet (excluding elementary particles)
Third group:	elementary particle symbols, i.e. Greek and English alphabet, e.g. μ (muon), p (proton)
Fourth group:	chemical formulae (including entries beginning with nuclei, e.g. ^{57}Fe)

CLASSIFIED LIST OF SUBJECT INDEX HEADINGS

In this list the headings are not arranged in alphabetical order, but are grouped into sections by subject, on the same basis as the arrangement in the fortnightly issues of Physics Abstracts. By using this list the reader can quickly determine all the headings which are appropriate to his subject, and then they can easily be found in the main index in their alphabetical position.

HEADINGS WITH NO ENTRIES

All the headings in current use in a given year are printed, even those for which there are no abstracts to be recorded. The latter are followed by the announcement "No entries". This confirms that these headings have not been dropped from the index, and entries may appear under them in subsequent issues.

NUCLEI, ELEMENTS, COMPOUNDS AND OTHER SUBSTANCES

Abstracts on nuclei whose mass number (or mass number range) is given are listed under a set of headings which begin "**Nuclei with. . . .**" e.g. Nuclei with $6 \leqslant A \leqslant 19$ where A is the mass number.

The names of elements, their compounds, a few compounds of special interest (e.g. "**Ruby**", "**Water**") and a few common materials (e.g. "**Wood**", "**Paper**") are included as headings or subheadings (e.g. "**barium titanate**" under "**Barium compounds**"). Under these, as well as under the appropriate "subject" headings, are listed any abstracts which contain significant physical information about the element, compound or substance named.

Inorganic compounds of the elements are listed under the first element in the chemical formula, and all the compounds of a given element are grouped under a single heading (e.g. "**Sodium compounds**"). Alloys are listed under compounds of the named constituents, e.g. Au-Ag alloys under "**Gold compounds**" and "**Silver compounds**". There are also four special headings for the common alloys: "**Aluminium alloys**", "**Copper alloys**", "**Iron alloys**", "**Nickel alloys**". Organic compounds are grouped under "**Organic compounds**", "**Polymers**", "**Plastics**" and under special substance headings such as "**Paper**", "**Proteins**", etc.; all the latter are listed at the end of the classified list of headings. Metallic co-ordination compounds when regarded as inorganic are listed under the appropriate metallic compound heading (not under organic compounds), e.g. Ni complex, bis(dimethylglyoximato)nickel(II) under "**Nickel compounds**"

CLASSIFIED LIST OF SUBJECT INDEX HEADINGS

The headings are grouped into sections on the same basis as the arrangement of the abstracts in the fortnightly issues of Physics Abstracts. A summary of the layout of these sections (these are actually further subdivided), is given below. Each section lists the headings which concern its subject and it follows that many of the headings are listed in several places.

SUBJECT SECTIONS

01.00	GENERAL
02.00	MATHEMATICAL PHYSICS
03.00	MECHANICS. ELASTICITY. VIBRATION. ACOUSTICS

SUBSTANCES

Chemical elements and inorganic compounds

All the chemical elements are listed by name, followed by their compounds, e.g. "Cadmium, Cadmium compounds".

"Hydrogen" is subdivided by the subheadings "neutral atoms", "neutral molecules" and "ions". "Deuterium" and "Tritium" are independent headings. "Hydrogen compounds" is supplemented by "Ice", "Steam" and "Water".

"Oxygen" is supplemented by "Ozone" and "Carbon" is supplemented by "Diamonds" and "Graphite".

The following inorganic compounds are further subdivided by subheadings as shown:-

- Barium compounds/
  - barium titanate*
- Cadmium compounds/
  - cadmium sulphide
- Calcium compounds/
  - calcium fluoride
- Gallium compounds/
  - gallium arsenide†
- Indium compounds/
  - indium antimonide†
- Lithium compounds/
  - lithium fluoride
- Nitrogen compounds/
  - ammonia
  - ammonium compounds
- Potassium compounds/
  - potassium bromide
  - potassium chloride
- Sodium compounds/
  - sodium chloride
- Zinc compounds/
  - zinc sulphide

* Ferroelectric properties are listed under "Ferroelectric materials/barium titanate"

† Semiconducting properties are listed under the corresponding subheadings of "Semiconducting materials"

Organic compounds

Organic compounds are grouped under headings "Organic compounds", "Polymers", "Plastics", "Proteins". "Rochelle salt" is an independent heading.

Co-ordination compounds

Metallic co-ordination compounds are regarded as inorganic with a few exceptions and are indexed under the appropriate metallic compound heading (not under organic compounds), e.g. Ni complex, bis (dimethylglyoximato) nickel (II) under Nickel compounds.

Substance groups

In addition there are the following headings for groups of elements, compounds or substances:-

- Actinides
- Actinide compounds
- Alkali metals
- Alkali-metal compounds/
  - halides
- Alkaline-earth metals
- Alkaline-earth compounds
- Ferrites
- Ferroelectric materials/
  - barium titanate‡

- Semiconductors
- Semiconducting materials/
  - gallium arsenide§
  - germanium§
  - indium antimonide§
  - silicon§
- Superconducting materials/
  - lead‖
  - niobium‖
- Transition metals
- Transition-metal compounds

‡ Used for ferroelectric properties only

§ Used for semiconducting properties only

‖ Used for superconducting properties only

Alloys

General papers on alloys are indexed under "Alloys". Alloys of specified composition are listed under, either

(i) special alloy headings (there are five of them: "Aluminium alloys", "Copper alloys", "Iron alloys", "Nickel alloys", "Steel"), e.g. Al-Ni alloys under "Aluminium alloys" and "Nickel alloys".

(ii) compounds of the named elements, e.g. Mn-Zn alloys under "Manganese compounds" and "Zinc compounds". Silicon-iron under "Iron alloys" and "Silicon compounds".

Special substances and materials

There are also the following special headings for certain common substances:-

- Air
- Blood
- Ceramics
- Clay
- Coal
- Concrete
- Fibres
- Gelatin
- Glass
- Mica
- Optical materials
- Paper
- Porous materials
- Powders
- Quartz
- Rubber
